It establishes the notion that a discounted cash flow mode captures the market valuation process. It then applies this concept of valuation not only to the typical analysis of capital expenditure decisions and cost of capital, but also to working capital management, financial budgeting and planning, and international financing and investing decisions. Additionally, this text is further differentiated by superior, substantive, and systematic treatment of the investing and financing decisions of multinational firms as part of the core managerial process. The government budget should be the financial mirror of society's choices. Yet most people view budgeting as the epitome of eye-glazing subjects, rarely explained in a way that is understandable to the non-specialist and too often presented without adequate consideration of a country’s governance and institutional capacity. Government Budgeting and Expenditure Management fills a gap in the literature to readdress these failings and does so in comparative international perspective. This book provides a comprehensive guide to the principles and easy-to-understand treatment of public financial management, taking into account a variety of special issues including budgeting in post-conflict situations, at subnational government levels, for military/security expenditures, and in countries with large extractive revenues. Distilling the lessons of budgeting reform in countries at different levels of income and administrative capacity, each chapter gradually progresses from the basic principles to the more technical aspects and then on to implementation issues, using concrete examples and illustrations from around the globe. Government Budgeting and Expenditure Management is ideally suited as the primary text for advanced undergraduate or graduate courses in government budgeting or public financial management, or as a supplementary text for courses in public finance, public economics, economic development, public administration or comparative politics. The aim of this book, first published in 1971, is to give the student of monetary economics a clear understanding of the theoretical potentialities of monetary policy as well as the practical limitations that prevent these potentialities from being realised. This volume discusses the central bank's operations in both long- and short-term financial markets, the effects of foreign inflows and outflows of funds, the implications of government budgetary policy, and the repercussions of the activity of non-bank financial institutions. Monetary Management should be of interest to students of finance and to all those concerned by controversies about the operation of monetary policy. Financial Management in the Sport Industry provides readers with an understanding of sport finance and the importance of sound financial management in the sport industry. It begins by covering finance basics and the tools and techniques of financial quantification, using current industry examples to apply the principles of financial management to sport. It then goes beyond the basics to show how financial management works specifically in sport - how decisions are made to ensure wealth maximization. Discussions include debt and equity financing, capital budgeting, facility financing, economic impact, risk and return, time value of money, and more. The final section focuses on sport finance in three sectors of the industry - public sector sports, collegiate athletics, and professional sports - providing in-depth analysis of financial management in each sector. Sidebars, case studies, concept checks, and practice problems throughout provide practical applications of the material and enable thorough study and practice. The business of sport has changed dynamically since the publication of the first edition, and this second edition reflects the impact of these changes on financial management in the sport industry. New to this edition are changes to reflect the global nature of sport (with, for example, discussions of income tax rates in the Premiere League), expanded material on the use of spreadsheets for financial calculations, a primer on accounting principles to help students interpret financial statements, a valuation case study assignment that takes students step by step through a valuation, a new stadium feasibility analysis using the efforts of the Oakland Raiders to obtain a new stadium, a new economic impact example focusing on the NBA All Star game, and much more.
